

C3 direction does not generalize to the entire complement gene set

a Source | NES 1.14; gene-set q 1.00

b External | NES -1.19; gene-set q 0.32

HALLMARK_COMPLEMENT selected before enrichment; 141 genes overlap the common universe. Ticks show set-member ranks.
Opposite enrichment directions and non-small adjusted q-values retain the whole-program claim on hold.
