

Wp score corrections: direction and library-size normalization

A Compass: consistency = $-\log(1 + \text{penalty})$

B Human scores: full-gene CP10K denominator

A: 60 computational pools / 4 libraries / 2 animals; nominal pool tests are not animal inference.

B: 10 paired donors; dots are donor differences. A nonsignificant regulatory contrast is not equivalence.

Both panels describe RNA-derived scores, not metabolic flux, cytokine protein, lineage or causal mechanism.
