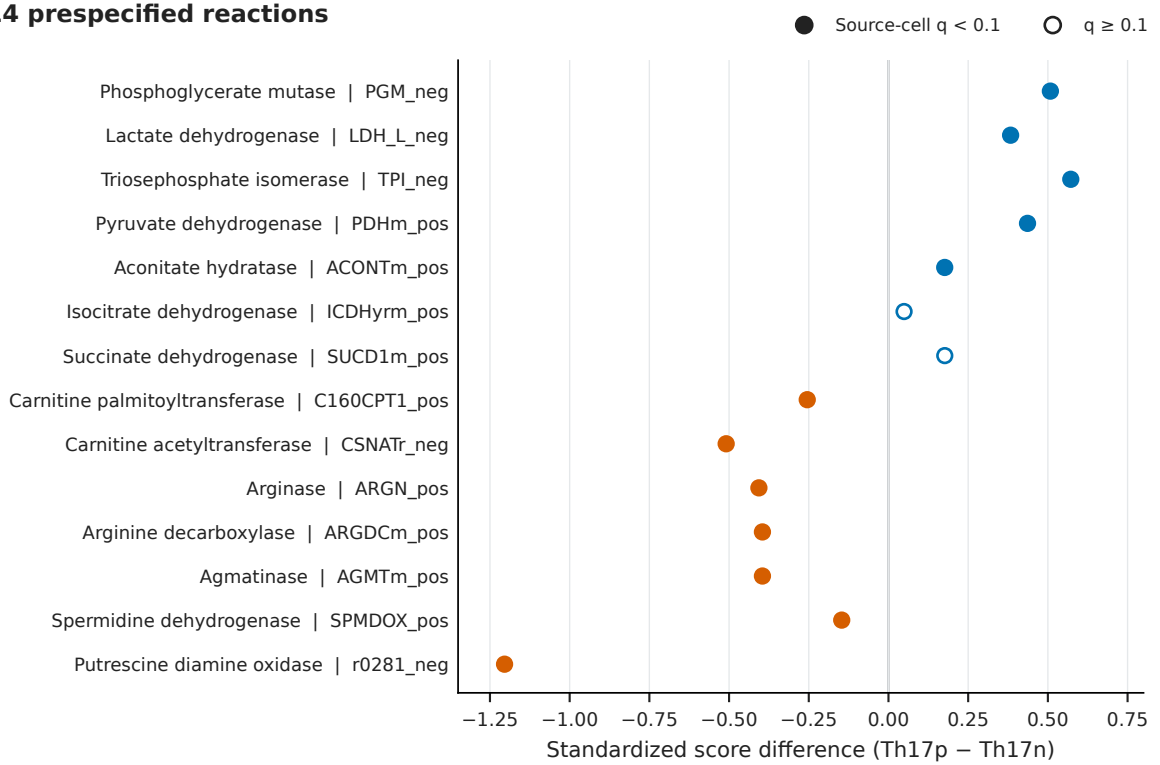
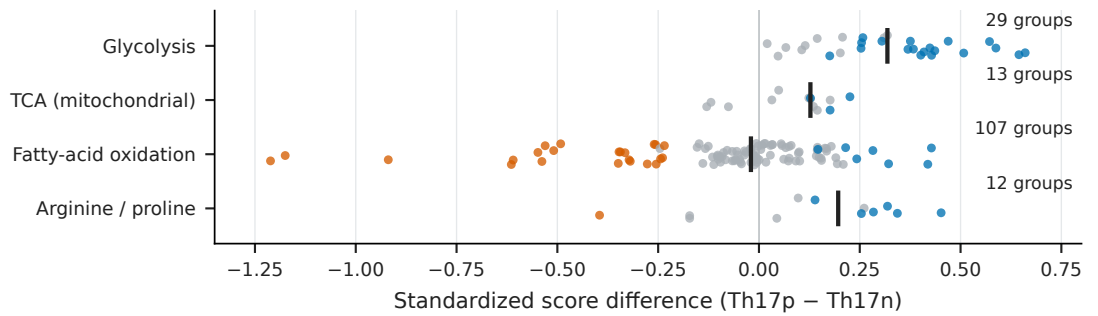
Reaction-level variation within metabolic pathways

Wagner 2021 author-output reanalysis | 48-hour differentiated, GFP-positive mouse CD4 cells

A All 14 prespecified reactions



B Four pathway contexts: every distinct core metareaction



139 Th17p / 151 Th17n cells; animal/preparation independence unresolved. Scores predict activity, not flux.
Blue: Th17p higher; orange: Th17n higher at source q < 0.1; gray: q ≥ 0.1. Black ticks: pathway medians.
