H3K27me3 signal across gene windows

Peeters et al. (2024) | EZH2 Y641F versus WT | Both WT-label assignments retained

E Candidate-window signal ratios: log2(gain / WT)

	Fresh GEO labels	Day four GEO labels	Fresh Filename labels	Day four Filename labels
Tigit	+1.11	+0.74	+0.88	+0.97
Prdm1	-1.42	-1.37	-1.20	-1.59
Ccr2	+0.95	+0.12	+0.59	+0.48
Igfbp4	-0.63	-0.04	-0.29	-0.38
Areg	-0.23	-1.19	-0.76	-0.66

A-D: 21,529 gene windows per comparison; dashed line, equal signal. Logarithmic axes; main view 0.02-5, insets 0.01-10,000.

E: shared color scale, no row standardization. All panels use annotated 5-prime +/-5-kb windows; aggregate tracks are not biological replicates.
