DFMO RNA responses and direct JMJD3 contrasts

68-hour bulk RNA | source-aligned TMM / limma-voom reanalysis with animal blocking

C–D: 4 WT + 3 KO animal labels; conditional 95% moderated intervals. All 12 fixed genes retained.
Every displayed interaction has all-gene BH q > 0.05; no equivalence claim. Horizontal scales differ.
Relative RNA does not measure lineage conversion, persistence or suppressive function.
